tempo

CHORUS

The Restaurant Growth Playbook.

One connected way to attract guests
and bring them back.

All together now.

EMAIL / SOCIAL / PAID MEDIA / GUEST FOLLOW-UP

RESERVATIONS / CATERING / REPEAT VISITS

The whole system.

For a restaurant group or independent restaurant, growth starts with a clear reason to choose you and an easy next step to do so. This guide connects the work that earns attention with the experience that turns interest into a reservation, an order, an event inquiry, or another visit.

Works for:

01 **One restaurant:**

Choose one outcome: reservations, direct orders, or catering inquiries. Start with one destination and one response plan.

02 **An established restaurant:**

Find a useful growth opportunity, such as a quieter daypart, a seasonal menu, or a new guest occasion. Check capacity and economics before creating the offer.

03 **A restaurant group:**

Start with shared brand standards, campaign templates, and a naming system. Set the offer, destination, audience, and owner for each location.

Use the worksheets to make decisions and assign ownership. Save your copy after entering your answers.

Put it to work.

START / The restaurant growth system 04

01 / The tools we use 05

02 / Website and landing pages 07

03 / Email and creative 10

04 / Content that brings guests in 12

05 / Filming and editing 14

06 / Ads that earn the next step 17

07 / Running Meta campaigns 20

08 / Google Ads for restaurants 22

09 / Where the click lands 23

10 / Follow-up that keeps the conversation moving 24

11 / Measure what matters 26

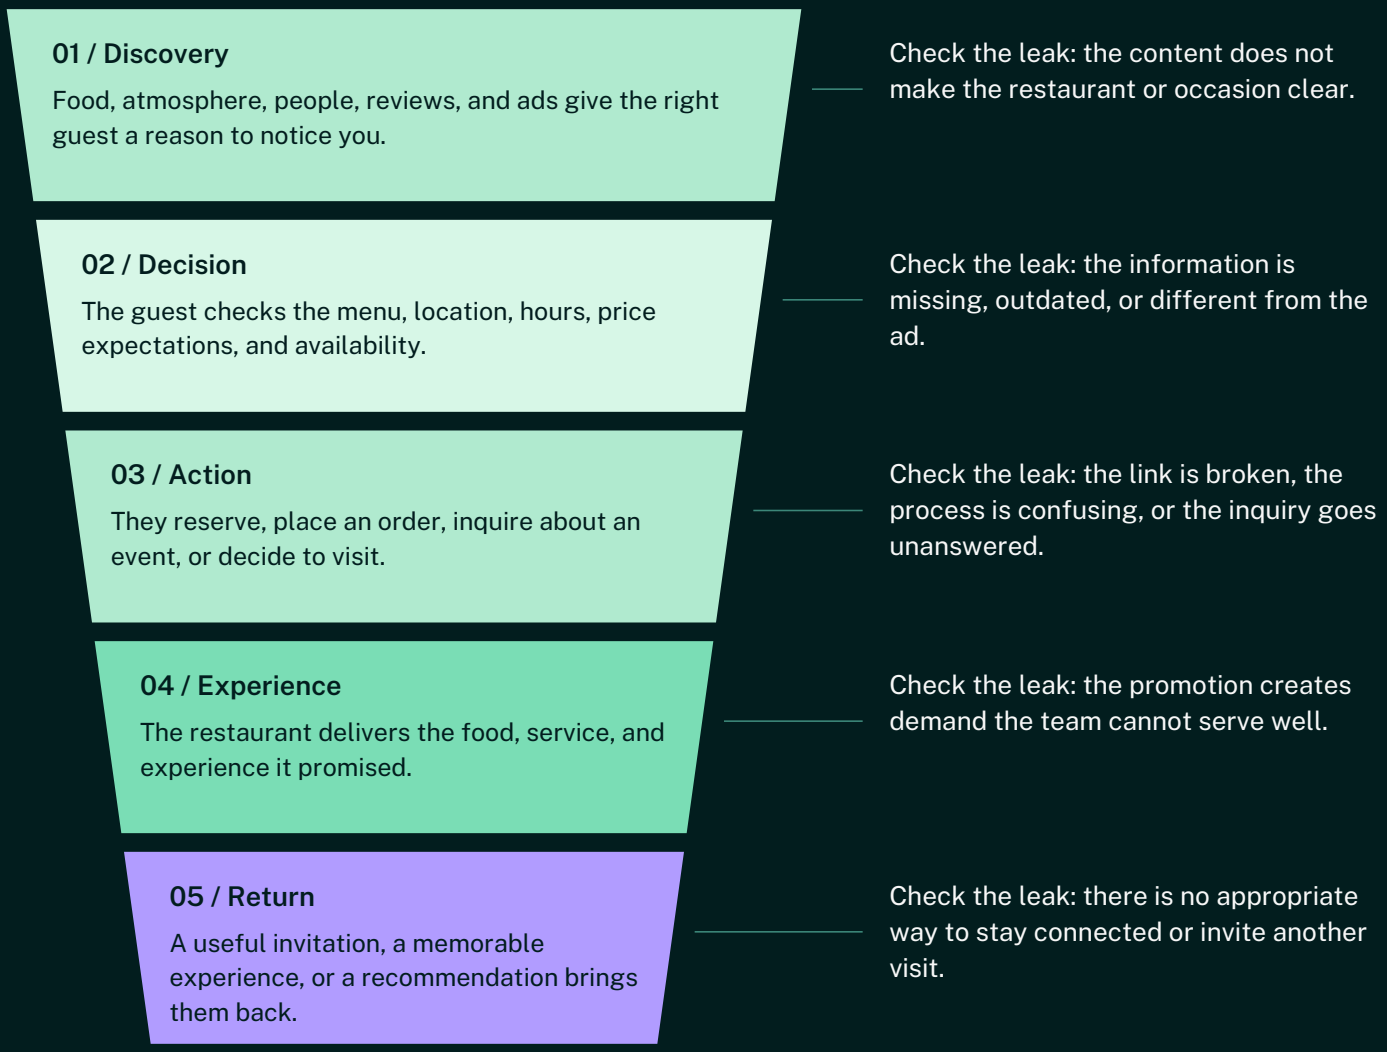

BONUS / Your first 30 days 28

CHECK / Your launch checklist 29

NEXT / Run it with Tempo HG, or build it in Chorus 30

Find the leak. Then fix that step.

Restaurant growth moves through five connected steps. Fix the weakest step before sending more traffic into it.

Build the destination, response plan, and measurement before asking ads to carry the business. Read the journey from discovery to return; diagnose it from the result back up.

For restaurant groups, inspect this journey by location. A working path at one restaurant does not confirm the others.

Fewer subscriptions. One place to work.

Use Chorus to organize the work around a specific restaurant outcome. Keep the tools that operate the restaurant connected where supported. Video editing is the specialist exception.

The job	How to use Chorus
Planning and copy	Keep the guest brief, offer, draft messages, and campaign ideas together. Use available AI tools to develop and refine drafts.
Marketing pages	Build a focused page for an offer, catering inquiry, or private event. Link to the correct reservation or ordering destination.
Contacts and conversations	Organize known contacts and route inquiries to the person who can answer.
Email and text	Send useful messages to the appropriate opted-in audience.
Follow-up	Build workflows around defined triggers, owners, timing, and stop conditions.
Creative and media	Store approved assets and use available creative and scheduling tools.
Campaign review	Connect supported ad accounts and reconcile results with the systems where bookings, orders, and events happen.
Video editing	Use a dedicated editor to assemble footage, captions, audio, and exports.

Reservation, ordering, point-of-sale, and loyalty systems may remain part of your setup. Confirm each integration and the data it actually shares before building an automation around it.

Feature availability depends on your Chorus plan and configuration. AI, messaging, calling, and other services may have usage charges. Confirm allowances before activation.

Start with the demand you can serve.

01 / One restaurant

Choose one outcome: more reservations during a specific service, more direct orders, or more qualified catering inquiries. Build one destination and one response plan. Start with your free 30-day Chorus trial.

02 / An established restaurant

Look for a useful growth opportunity: a quieter daypart, a seasonal menu, a new occasion, or an audience that has not discovered you. Check capacity and economics before creating the offer.

03 / A restaurant group

Create shared brand standards, campaign templates, and a naming system. Give each location its own accurate details, destination, audience, and accountable owner.

Restaurant example

A neighborhood restaurant wants more early-week dinner reservations. Its campaign shows real dishes and the dining room, explains the reason to visit, and takes guests directly to that location's reservation page.

Build toward a clear outcome. Show the food, make the occasion tangible, and make the next step easy.

The page starts with a better brief.

Before writing a prompt, define the guest, the occasion, the offer, and the action. Every draft should trace back to this brief.

Restaurant and location:

Who is the guest?

Describe the people you want to reach, where they are, and the occasion they are planning.

What do they want?

Examples: an easy family dinner, a date-night destination, a quick lunch, or reliable catering for a team meeting.

What is the offer and one next action?

State what is available, when and where it is available, and whether the guest should reserve, order, or inquire.

What three questions could stop the decision?

Consider menu choices, pricing, parking, dietary questions, party size, timing, or pickup details. Use the questions your team actually hears.

What three phrases appear in real guest reviews?

Use approved excerpts with accurate attribution. Do not invent reviews.

What are the operating limits?

Record dates, dayparts, capacity, exclusions, lead time, and who approves the offer.

Where does the action happen, and who owns it?

Record the correct URL, location, system, and person responsible for inquiries.

Copy the brief into Chorus. Ask it to identify missing information before drafting. Leave unknown facts as placeholders until verified.

15-minute starting point

A vague brief produces vague copy. Ask Chorus to identify what is missing before it drafts the page.

Build the page around the visit.

Use the page-building tools available in Chorus to turn your brief into a first draft. Keep the restaurant's real information and approved assets close at hand.

PRIVATE-DINING LANDING PAGE

01 / THE BRIEF

Private dining.
Large groups.
One clear action.

Confirm room details.
Show the space.
Make reserving easy.

[RESTAURANT]

PRIVATE DINING

A room for the whole gathering.

A spacious setting for celebrations, team dinners, and group occasions.

Reserve the private room

PLAN YOUR GATHERING

Preferred date | Party size | Check availability

01 Start with the brief

Describe the guest, occasion, offer, sections, and one primary call to action. Ask for placeholders wherever facts or proof are missing.

02 Review the draft

Check the food descriptions, availability, location, hours, offer terms, and every claim. Review the page on a phone. Replace illustrative images with approved restaurant photography.

03 Connect the next step

For reservations or ordering, use the correct location's booking or checkout destination. For catering and private events, connect a short inquiry form and route it to the right person.

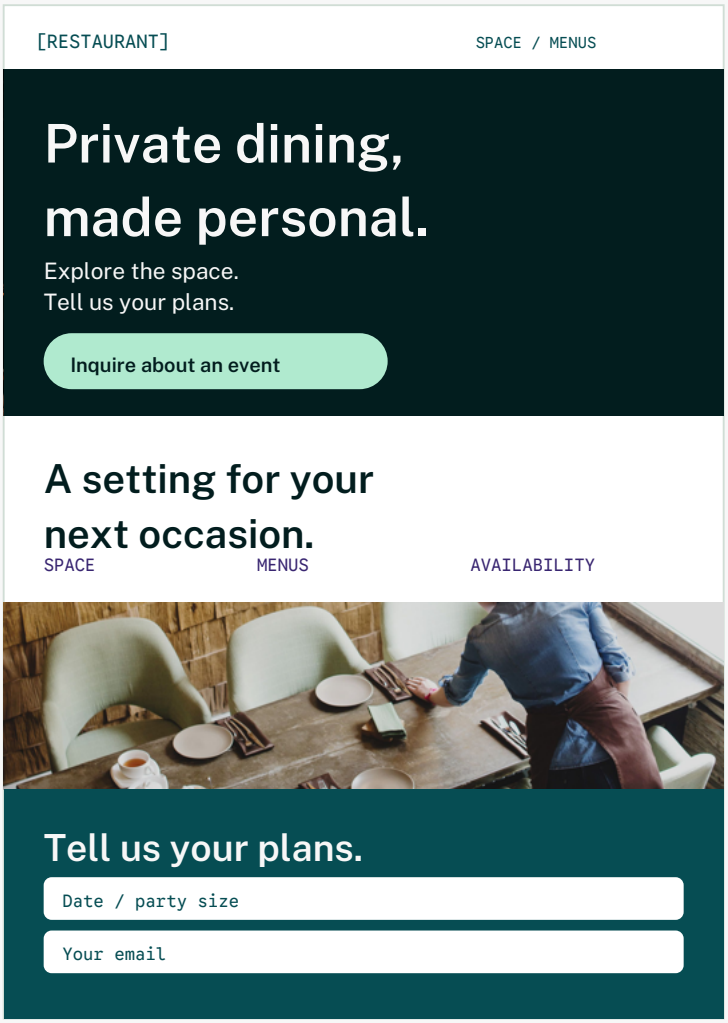

04 Test the full path

Complete a test inquiry or verify the external booking/order path. Confirm what data returns to Chorus and what must be reviewed in another system.

Starter prompt

“Use this restaurant brief: [paste]. Draft a mobile-friendly page with a clear headline, real food and atmosphere imagery placeholders, essential visit details, verified proof, and one primary CTA: [action]. Use only supplied facts. Flag anything missing. Include the exact location and offer terms.”

Give the guest a clear next step.

PRIVATE-DINING PAGE CONCEPT

01 Match the promise

The ad and page should describe the same restaurant, occasion, and offer.

02 Show the experience

Use real dishes, drinks, people, and spaces. Help guests understand what they can expect.

03 Answer practical questions

Include the menu, location, hours, and relevant details. Confirm dietary and accessibility information with the restaurant team before publishing.

04 Choose the action

Reserve a table. Order directly. Inquire about catering. Plan a private event. Pick the primary action for this page.

05 Test on a phone

Check every link and form, including location selection. Make sure an inquiry reaches the person who can respond.

Example: private dining

Show the actual room, describe the occasions it serves, include confirmed capacity and package information, and invite guests to inquire with their date and party size.

For restaurant groups, make the selected location obvious from the first screen through the final action.

An email worth opening. A reason to visit.

One message, one job, one next step. Build a welcome sequence for guests who have chosen to receive marketing.

[RESTAURANT] / EMAIL

Your next dinner starts here.

Good food. Great company.

Explore the menu and make a plan to join us.

Reserve a table

RESTAURANT EMAIL EXAMPLE

FIVE EMAILS. FIVE JOBS.

01 **Immediately - Welcome**

Deliver what the guest requested. If they signed up for an offer, state its real terms and how to use it. Otherwise, introduce the restaurant and a useful next step.

02 **Day 1 - Meet the restaurant**

Share the people, food, and point of view behind the experience.

03 **Day 3 - Find your occasion**

Show what a visit could look like: lunch with coworkers, dinner with friends, or another occasion the restaurant actually serves.

04 **Day 5 - Make the decision easy**

Answer a common question using accurate details. Link to the menu, visit information, or relevant service page.

05 **Day 7 - Invite the visit**

Make a direct invitation to reserve, order, or explore an upcoming experience. Use a real reason to act.

SEQUENCE NOTES

This is a starting sequence. Adjust timing and suppress overlapping messages when a guest acts. Keep booking confirmations, order updates, and other operational messages tied to their own events.

For groups, use the guest's selected location when known. Do not guess their preferred restaurant.

Write. Design. Keep it together.

Build from the same restaurant identity every time.

- 1. Set the approved logo, colors, typography, voice, and location naming conventions.
- 2. Create a library of real food, drink, interior, exterior, and team photography.
- 3. Ask Chorus for concepts that include a hook, visual idea, occasion, and CTA.
- 4. Develop a reusable template and adapt it for square, portrait, and vertical placements.
- 5. Save approved assets with the restaurant, location, campaign, and date in the filename.
- 6. Check menus, offer dates, links, and approval status before publishing.

AI can help with concepts, copy, backgrounds, and editing support. Photograph the dishes and experience guests will actually receive. Do not invent food offerings, guest endorsements, awards, or performance results.

FOOD / PEOPLE / EXPERIENCE / ILLUSTRATIVE PHOTOGRAPHY

A trail of reasons to choose you.

Give each post a job. Use a mix that shows the food, answers questions, and earns the next step.

01 **Signature dish** - Show a real dish and what makes it distinctive.

02 **Preparation** - Show the work behind the plate: ingredients, technique, or finishing touches.

03 **Guest experience** - Share an approved guest story or testimonial.

04 **Occasion** - Show how the restaurant fits a specific plan or moment.

05 **Behind the scenes** - Introduce the people creating the experience.

06 **Useful details** - Explain parking, pickup, reservations, or event options.

07 **Menu discovery** - Help a guest explore the menu or choose a starting point.

08 **Common question** - Answer a question the team regularly receives.

09 **Chef or owner perspective** - Share an informed point of view in their own voice.

10 **Invitation** - Promote a real menu launch, event, occasion, or offer with one next step.

Use real availability and real proof. For groups, mix shared brand stories with local teams, spaces, and community relevance.

Film once. Publish with a plan.

Plan a focused shoot that produces a useful mix of material.

- Three preparation or service sequences.
- Two approved guest or team stories.
- Five answers to common guest questions.
- Ten short detail shots of food, drinks, interiors, and atmosphere.

Aim to develop a workable content batch from the footage, then set a publishing rhythm the team can sustain. Three posts per week can be a starting schedule; usefulness and consistency matter more than filling slots.

Use Instagram and Facebook for visual discovery and local updates. Add other channels when they fit your audience and the team can maintain them. Keep location information current wherever guests find you.

In the opening seconds, show the food or experience and name the occasion. End with an action that fits the post.

Connect supported channels in Chorus's social scheduling tools. Preview each placement and check time-sensitive information before scheduling.

PREPARATION / PRODUCTION / DETAILS / ILLUSTRATIVE PHOTOGRAPHY

The filming day is the multiplier.

Record openings, the main story, and calls to action as separate clips so the footage can serve several campaigns.

Shoot focus	Who and where	Capture
Food and drinks	Kitchen, bar, and approved shooting area	Preparation, plating, pouring, close-ups, and finished dishes.
Dining experience	Dining room and service team	Arrival, room details, hospitality, and realistic dining moments.
Catering and private events	Actual event space and catering team	Room setups, packages, service, and answers to inquiry questions.
Chef or owner story	Quiet area with good light	Short hooks, the restaurant's story, common questions, and invitations.

Before the camera rolls

Approve the shot list, prepare dishes and spaces, arrange staff participation, and obtain permission for anyone featured. Agree on intended advertising use. Plan around service so filming does not disrupt the guest experience.

For groups, identify the location in the footage log and capture details that distinguish it. Do not use one restaurant's space to imply another has the same amenities.

A phone, tripod, microphone, and suitable light are enough to start. Capture vertical footage for social and leave room for captions. Say the clip number before each take.

One editor. A repeatable process.

Choose a video editor the team can use consistently. Keep the originals, working project, approved assets, and exports organized.

01

Choose the workflow

Use an editor such as Premiere Pro or DaVinci Resolve, or another tool that meets your production needs.

02

Prepare the project

Separate footage by restaurant, location, shoot date, and clip type. Keep scripts and the editing checklist with the project.

03

Add AI assistance where useful

Use supported tools to help with transcripts, selects, captions, or variations. Review the output for menu names, prices, wording, and visual accuracy.

Optional advanced workflow

An AI agent may work with an editor through a compatible connection. Confirm compatibility and project access before relying on it. This setup is optional and belongs in a production appendix rather than the restaurant launch requirements.

Build one good ad. Then make variations.

01 / Organize the shoot

Keep originals intact. Use numbered folders for footage, audio, selects, projects, exports, scripts, and notes.

02 / Write the editing checklist

Record caption style, logo placement, audio treatment, aspect ratios, naming, and review steps.

03 / Build the first draft

Assemble an opening, a short story, and one action. Show the food or experience early. Keep text readable on a phone.

04 / Review the promise

Verify dish names, availability, location, prices, dates, and CTA destination. Check permissions for featured people and assets.

05 / Make a small batch

Swap approved openings or story blocks into the reviewed structure. Watch every export for wording, cuts, audio, and framing.

06 / Save and improve

Store approved files in the Chorus Media Storage. Keep editable projects and originals in the production archive. Update the checklist with useful fixes.

Starter prompt

“Use my approved restaurant footage, brief, scripts, and editing checklist. Assemble one opening + story + CTA draft for [location and occasion]. Use only confirmed facts. Flag missing assets or details. Let me review the draft before creating variations.”

Write blocks. Build combinations.

An ad has three parts. Keep them modular so you can learn which opening, story, and next step work together.

H	M	C
Hook	**Main Story**	**Call To Action**
First 3 seconds. Earn attention.	10-20 seconds. Make the case.	One clear next action.

H / Hook

The opening seconds. Show something worth noticing and make the occasion clear.

M / Main story

Make the case with real food, atmosphere, people, or useful details.

C / Call to action

Give the guest one clear next step.

Example

Hook: “Your next dinner plan starts here.”

Story: Show the restaurant's actual dishes and dining room, with a concise description of the experience.

CTA: “Explore the menu and reserve your table.”

Build a library of approved blocks. Start with a small batch the budget can support, then use results to choose the next variations.

Let Chorus draft. You decide what stays.

Ask for openings across five families. Keep the strongest, say each aloud, and remove anything the restaurant cannot substantiate.

Family	The job	Illustrative opening
Occasion	Names the moment	“Making dinner plans for this weekend?”
Experience	Shows what guests can expect	“Take a look at your next night out.”
Convenience	Makes a useful path clear	“Planning lunch for the whole team?”
Curiosity	Opens a worthwhile question	“Here's how this dish comes together.”
Proof	Uses a verified fact or observable action	“Watch our kitchen finish this signature dish.”

These are starting examples. Use them only when the brief and footage support them.

Prompt

“Here is the restaurant brief: [paste]. Write ten hooks in each family: occasion, experience, convenience, curiosity, and proof. Keep each under twelve words and natural when spoken. Tag the family. Use only supplied facts, identify the intended guest occasion, and flag missing proof.”

A naming system you can learn from.

Use a consistent structure across creative files and ads.

LOC-OCCASION-H07-M2-C1

Location | occasion or offer | hook seven | story two | CTA one

Useful story blocks include the food and experience, genuine guest proof, an answer to a practical question, and the chef or owner's perspective.

Choose a CTA that fits the campaign: reserve, order directly, or inquire about catering/private events. A menu view may help the decision, but it is a different outcome from a completed booking or order.

Launch a batch you can support

Use enough distinct ideas to learn without spreading a small budget too thin. Review delivery early, then evaluate meaningful outcomes over a period that fits the restaurant's booking or inquiry cycle.

Keep proven ads intact when creating new variants. Judge performance alongside the destination, availability, response time, and economics.

CREATIVE ID / ILLUSTRATIVE STRUCTURE

LOC - OCCASION - H07 - M2 - C1

LOCATION	OCCASION	HOOK	STORY	ACTION

Use the same ID in the creative filename, campaign, and weekly scorecard.

A simple structure. A clear restaurant outcome.

Choose the campaign outcome before building the audience. Use the restaurant's realistic guest catchment and the occasion being promoted to guide geographic reach.

ILLUSTRATIVE CAMPAIGN STRUCTURE

CAMPAIGN
Restaurant outcome

>

AD SET
Location + destination

>

ADS
H07 / H12 variants

Campaign role	Audience approach	Creative job
Discovery	People in the relevant area	Introduce the food, occasion, and experience.
Reconsideration	Eligible engaged audiences where available	Answer practical questions and reinforce the reason to act.
Return	Appropriate existing guest audiences with required permissions	Invite another visit with relevant news or an offer.

Small budgets may begin with one focused discovery campaign. Add other campaigns when audience size, measurement, and economics support them.

Set the foundation

The restaurant or group owns its business assets and ad accounts. Configure supported tracking and verify the events you can actually observe. Connect lead capture to Chorus where supported.

If the reservation or ordering provider does not share completed outcomes, document that limitation. Report outbound clicks separately from completed reservations and paid orders.

For groups, keep location names and destinations explicit. Review results by location before assuming the same campaign works everywhere.

Four weeks. Four useful decisions.

Week 1 / Launch and observe

Check delivery, location accuracy, destination links, inquiry routing, and the full guest path.

NEXT ACTION + OWNER

Week 2 / Keep and combine

Keep promising ads intact. Test another opening or story that supports the same offer.

NEXT ACTION + OWNER

Week 3 / Read and refresh

Review meaningful outcomes, guest questions, and operational feedback. Create more of the ideas bringing the right demand.

NEXT ACTION + OWNER

Week 4 / Scale and prepare

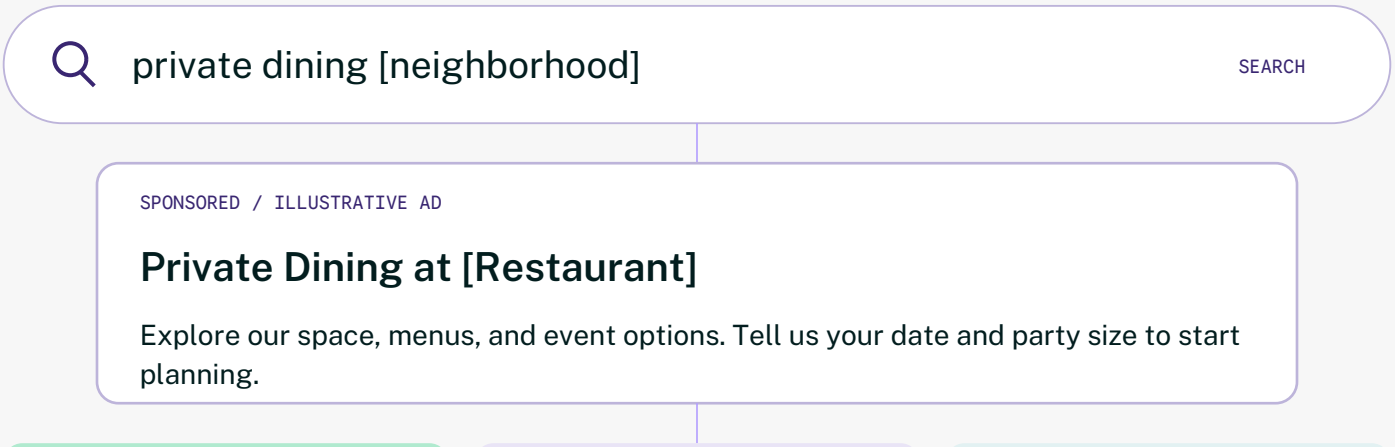

Increase spend when results, economics, and capacity support it. Brief the next shoot from what you learned.

NEXT ACTION + OWNER

Rising costs may reflect creative, audience, offer, availability, the destination, or follow-up. Review the whole path before choosing the fix.

Meet the search. Earn the next step.

Connect a guest's search to the page that answers it.

01

Match the need

Separate useful search themes such as cuisine and location, direct ordering, catering, and private dining. Match each theme to its destination.

02

Remove the waste

Review search terms and exclude irrelevant intent. Use care with exclusions that could also remove valuable guests.

03

Complete the path

Make the menu, location, and primary action clear. Confirm hours, contact information, and conversion tracking.

04 / Check the outcome

Distinguish calls, menu views, and booking/order clicks from completed transactions. Reconcile event inquiries with the team's actual pipeline.

For groups, confirm each location's destination and geographic settings. Coordinate paid search with accurate business profiles and location information.

Send the guest to the right next step.

Choose the destination around the decision.

- Reservations: the correct restaurant's booking experience.
- Direct orders: the correct location's ordering experience.
- Menu discovery: an up-to-date, mobile-friendly menu with an obvious next step.
- Catering or private events: a relevant page and a short inquiry form.

Illustrative catering conversation

Guest: “Do you cater office lunches?”

Team: “Thanks for reaching out! What date are you planning for, and about how many people?”

After the reply: “Thanks. Our catering team will review availability and help with the menu and next steps.”

01

Acknowledge

Confirm the inquiry reached the team. State a response timeframe the restaurant can meet.

>

02

Clarify

Ask for the information needed to route it: location, date, party size, or service type.

>

03

Move it forward

Assign a person to confirm availability and discuss options. Avoid promising capacity, pricing, or dietary accommodations before verification.

Manage supported inquiries in Chorus Conversations. Give each inquiry an owner and a clear next action.

Be useful at the next moment.

Build workflows around real events and confirmed data. These four patterns are a starting point.

01 / New catering or event inquiry

Specific form submitted > acknowledgment > location assignment > staff task > personal response.

The acknowledgment confirms receipt. The team confirms availability and details.

02 / Missed inquiry call

Supported missed-call event > helpful text, where permitted > conversation assignment.

Example: “Thanks for calling [Restaurant]. How can our team help?”

03 / Inquiry still open

No reply or confirmed booking after the agreed interval > useful follow-up > owner review.

Offer help with the guest's original request. Stop the sequence on reply, closure, booking, or opt-out, as appropriate.

04 / After the experience

Confirmed completed visit, order, or event, where available > appropriately timed feedback or review invitation.

Ask consistently for honest feedback. Do not make public review requests conditional on a positive response.

Repeat-visit marketing

Use a separate workflow for opted-in guests. Send relevant menu news, occasions, or invitations based on verified preferences and available data.

Configure consent preferences, sending windows, sender registration, frequency, and stop conditions before activation. Do not trigger a post-visit message from an unverified booking click.

See the trigger. Then the next action.

Use Chorus's workflow tools to build one complete path before repeating it.

01

Define the trigger

Choose the exact form or supported event. Filter by location and inquiry type where needed.

02

Assign ownership

Route the conversation to the right person. Set the staff task and a response expectation the team can meet.

03

Write the message

Use the restaurant's voice, correct location details, and one useful next step. Keep automatic acknowledgments distinct from confirmed bookings.

04

Set the stops

Define what happens on reply, booking, closure, cancellation, and opt-out. Apply the stops relevant to this workflow.

05

Test before publishing

Use a test contact. Confirm routing, timing, message content, duplicate prevention, and stop conditions. Check how the workflow interacts with existing restaurant systems.

Example: private-event inquiry

Form submitted > location identified > acknowledgment sent > event manager notified > response task created > follow-up only while the inquiry remains open.

Measure the outcome you chose.

Use a small set of numbers that connects spend to real restaurant activity.

Number	Calculation or definition	How to use it
Cost per tracked outcome	Ad spend ÷ tracked completed outcomes	Define the outcome first: completed reservation, fulfilled order, or another verified action.
Reservation attendance	Attended reservations ÷ completed reservations	Review cancellations and no-shows where the booking system provides reliable records.
Inquiry-to-booked rate	Booked catering/private events ÷ qualified inquiries	Review inquiry quality, availability, and response time.
Attributed revenue and ROAS	Attributed revenue ÷ ad spend	Use verified revenue and a consistent attribution method. Separate estimates from measured results.
Repeat activity	Returning guests or orders within a defined period	Use identifiable, reliable records and a consistent definition.

Set the economics before launch

Agree on what a useful outcome is worth using contribution margin, fulfillment costs, capacity, and any supported repeat-business assumptions. Set separate targets for dine-in, direct ordering, and catering when their economics differ.

Cost per outcome becomes customer acquisition cost only when the data identifies newly acquired customers. A reservation can represent several covers, an existing guest, or a cancellation.

If completed outcomes are unavailable, report the observable actions and explain the gap. Keep platform-reported results separate from restaurant-confirmed outcomes until reconciled.

For groups, use consistent definitions and review location results alongside group totals.

Your weekly scorecard.

Enter the week's numbers, then choose one action.

Week of:	**Restaurant / location:**	**Primary campaign outcome:**
Ad spend:	**Tracked completed outcomes:**	**Outcome definition and source:**
Cost per tracked outcome:	**Qualified catering / event inquiries:**	**Confirmed catering / event bookings:**
Attributed revenue:	**Attribution method / window:**	**ROAS, when revenue is verified:**
Winning creative ID:	**Operational feedback / capacity:**	**One change for next week + owner:**

Checks:

- Conversion events tested and definitions recorded.
- Duplicate counting checked across connected systems.
- Campaign links and tracking parameters checked.
- Inquiries and outcomes reconciled with Chorus and restaurant systems.
- Cancellations, refunds, and attendance handled consistently where relevant.

Use only the fields relevant to your campaign. Record unavailable data as unavailable. For groups, complete location scorecards before reviewing the total.

Your first 30 days.

Sequence matters more than the exact day. Adjust the calendar to the restaurant's readiness and service schedule.

Days 1-7 / Align and connect

Choose the location, guest occasion, primary outcome, budget, and owner. Confirm account access, current menus, hours, capacity, booking/ordering links, and available tracking.

01 02 03 04 05 06 07

Days 8-14 / Research and build

Complete the brief. Draft the page, hooks, guest emails, and inquiry responses. Build the core follow-up workflow. Confirm offer terms and approvals.

08 09 10 11 12 13 14

Days 15-21 / Create and prepare

Capture the food, team, and experience. Edit and approve a manageable creative batch. Name assets and prepare the location-specific destinations.

15 16 17 18 19 20 21

Days 22-28 / Test and launch

Test the guest path, routing, messages, and measurement. Confirm staff readiness, then launch when the checks pass.

22 23 24 25 26 27 28

Days 29-30 / Learn and improve

Review early delivery, guest questions, and operational feedback. Review completed outcomes as they become available and choose the next improvement.

29 30

Assign the work

Owner or leadership: goals, offer, and budget.

Restaurant manager: accuracy, capacity, and staff readiness.

Inquiry owner: catering and private-event responses.

Creative team: assets, shoot, and approvals.

Marketing team: tracking, launch, reporting, and iteration.

One person may cover several roles. Give every decision a named owner. Restaurant groups should confirm responsibilities centrally and at each location.

Three gates before you go live.

01 / The promise

- ☐ One guest occasion, offer, location, and primary CTA.
- ☐ Menu items, prices, dates, hours, and terms verified.
- ☐ Claims, testimonials, photography, and permissions approved.
- ☐ Landing page checked on a phone.
- ☐ The restaurant can fulfill the promoted experience.

02 / The guest path

- ☐ Correct reservation, ordering, or inquiry destination tested.
- ☐ Location selection and inquiry routing verified.
- ☐ Every inquiry has an owner and response plan.
- ☐ Relevant workflows tested with a test contact.
- ☐ Consent settings, timing, and stop conditions verified.
- ☐ Existing booking and ordering messages checked for overlap.

03 / The learning loop

- ☐ Creative names match campaigns and destinations.
- ☐ Events and tracking links tested.
- ☐ Observable actions distinguished from completed outcomes.
- ☐ Budget, economic targets, capacity, and review date agreed.
- ☐ Reporting sources and attribution limitations documented.

For groups, complete the checklist for each participating location.

Launch owner:

Location manager:

First review date:

Let's go!

A clear reason to visit. Real food and atmosphere. Useful creative. Paid media. Pages and guest follow-up that work together. A weekly decision about what to improve.

Twenty minutes and we're ready to go.

We'll pull up your restaurant's website or account and show you the first three ads we would run for your restaurant. Free, whether you hire us or not.

Book my free 20-minute call.
